

# Principles of surface-enhanced Raman spectroscopy

## and related plasmonic effects

Eric C. Le Ru and Pablo G. Etchegoin

<b>Preface</b>	<b>xiii</b>
<b>Notations, units and other conventions</b>	<b>xvii</b>
<b>1 A quick overview of surface-enhanced Raman spectroscopy</b>	<b>1</b>
1.1 What is SERS? – Basic principles	1
1.2 SERS probes and SERS substrates	3
1.2.1 SERS substrates	3
1.2.2 SERS probes	6
1.2.3 Example	8
1.3 Other important aspects of SERS	9
1.3.1 SERS enhancements	9
1.3.2 Sample preparation and metal/probe interaction	10
1.3.3 Main characteristics of the SERS signals	11
1.3.4 Related techniques	13
1.3.5 Related areas	14
1.4 Applications of SERS	14
1.4.1 Raman with improved sensitivity	15
1.4.2 SERS vs fluorescence spectroscopy	15
1.4.3 Applications specific to SERS	17

1.5	The current status of SERS	17
1.5.1	Brief history of SERS	17
1.5.2	Where is SERS now?	20
1.5.3	Current ‘hot topics’	21
1.6	Overview of the book content	23
1.6.1	General outline of the book	23
1.6.2	General ‘spirit’ of the book	24
1.6.3	Different reading plans	25
<b>2</b>	<b>Raman spectroscopy and related optical techniques</b>	<b>29</b>
2.1	A brief introduction	30
2.1.1	The discovery of the Raman effect	30
2.1.2	Some applications of Raman spectroscopy	31
2.1.3	Raman spectroscopy instrumentation	32
2.2	Optical spectroscopy of molecules	33
2.2.1	The energy levels of molecules	33
2.2.2	Spectroscopic units and conversions	36
2.2.3	Optical absorption	38
2.2.4	Emission and luminescence	39
2.2.5	Scattering processes	42
2.2.6	The concept of cross-section	46
2.2.7	The Raman cross-sections	50
2.2.8	Examples of Raman cross-sections	53
2.2.9	Mechanical analogs	57
2.3	Absorption and fluorescence spectroscopy	59
2.3.1	Optical absorption and UV/Vis spectroscopy	59
2.3.2	Fluorescence spectroscopy	63
2.3.3	Photo-bleaching	67
2.4	Phenomenological approach to Raman scattering	70
2.4.1	Dipolar emission in vacuum	71
2.4.2	The concepts of polarizability and induced dipole	73
2.4.3	The linear optical polarizability	75
2.4.4	The Raman polarizability	77
2.4.5	The local field correction	78
2.4.6	Polarizabilities and scattering cross-sections	80
2.4.7	Final remarks on the phenomenological description	87
2.5	Vibrations and the Raman tensor	88
2.5.1	General considerations	88

<i>PRINCIPLES OF SERS</i>	iii
2.5.2 A primer on vibrational analysis	89
2.5.3 The Raman tensor	91
2.5.4 Link to the Raman polarizability	93
2.5.5 Limitations of the classical approach	97
2.5.6 A brief overview of related Raman scattering processes	98
2.6 Quantum (or semi-classical) approach to Raman scattering	99
2.6.1 Justification of the classical approach	100
2.6.2 The quantization of vibrations	101
2.6.3 The full expressions for the Raman cross-section	102
2.6.4 The anti-Stokes to Stokes ratio	105
2.7 Advanced aspects of vibrations in molecules	106
2.7.1 More on vibrational analysis	107
2.7.2 More on symmetries and Raman selection rules	114
2.7.3 Modeling of molecular structure and vibrations	117
2.8 Summary	119
<b>3 Introduction to plasmons and plasmonics</b>	<b>121</b>
3.1 Plasmonics and SERS	122
3.2 The optical properties of noble metals	123
3.2.1 The Drude model of the optical response	124
3.2.2 The optical properties of real metals	125
3.2.3 Non-local optical properties	127
3.2.4 What makes the metal–light interaction so special?	127
3.3 What are plasmons?	131
3.3.1 The plasmon confusion	131
3.3.2 Definition and history	132
3.3.3 The relation between plasmons and the dielectric function	135
3.3.4 Electromagnetic modes in infinite systems	136
3.3.5 Electromagnetic modes of a system of material bodies	141
3.3.6 Classification of electromagnetic modes	143
3.3.7 Other properties of electromagnetic modes	144
3.3.8 Summary and discussion	146
3.4 Surface plasmon–polaritons on planar interfaces	149
3.4.1 Electromagnetic modes for a planar dielectric/metal interface	149
3.4.2 Properties of the SPP modes at planar metal/dielectric interfaces	155
3.4.3 Coupling of PSPP modes with light	159
3.4.4 PSPP resonances at planar interfaces	164

3.4.5	Local field enhancements and SPPs at planar interfaces	167
3.4.6	SPP modes on planar interfaces: A brief summary	173
3.5	Localized surface plasmon-polaritons	174
3.5.1	Introduction to localized SPPs	174
3.5.2	LSP on planar structures	175
3.5.3	LSP modes of a metallic sphere	175
3.5.4	LSP modes of nano-particles	177
3.5.5	LSP resonances	177
3.5.6	Local field enhancements and LSP	178
3.5.7	Interaction of SPPs – gap SPPs	179
3.6	Brief survey of plasmonics applications	181
3.6.1	Applications of surface plasmon resonances	181
3.6.2	SPP propagation and SPP optics	182
3.6.3	Local field enhancements	182
<b>4</b>	<b>SERS enhancement factors and related topics</b>	<b>185</b>
4.1	Definition of the SERS enhancement factors	186
4.1.1	General considerations	187
4.1.2	The analytical point of view	190
4.1.3	The SERS substrate enhancement factor – Experimental approach	191
4.1.4	The SERS cross-section and single-molecule EF	192
4.1.5	The SERS substrate enhancement factor – Formal definition	197
4.1.6	Discussion and merits of the various definitions	198
4.2	Experimental measurement of SERS enhancement factors	200
4.2.1	The importance of the non-SERS cross-section	202
4.2.2	Example of AEF measurements	203
4.2.3	Link between SSEF definition and experiments	205
4.3	Overview of the main EM effects in SERS	209
4.3.1	Analysis of the EM problem of SERS	209
4.3.2	Local field enhancement	212
4.3.3	Radiation enhancement	214
4.3.4	Other EM effects	216
4.3.5	The common $ E ^4$ -approximation to SERS enhancements	217
4.4	Modified spontaneous emission	219
4.4.1	Introduction	219
4.4.2	The link between spontaneous emission and dipolar emission	220
4.4.3	Modification of dipole emission: definitions of enhancement factors	224

4.4.4	Spontaneous emission and self-reaction	229
4.4.5	The Poynting vector approach	231
4.4.6	Spontaneous emission and the optical reciprocity theorem	233
4.5	Formal derivation of SERS EM enhancements	237
4.5.1	Definitions, notations, and assumptions	237
4.5.2	The SERS EM enhancement: general case	240
4.5.3	SERS EM enhancements in the back-scattering configuration	245
4.6	Surface-enhanced fluorescence (SEF)	248
4.6.1	Similarities and differences between SEF and SERS	248
4.6.2	Modified (enhanced) absorption	249
4.6.3	Modified fluorescence quantum yield	250
4.6.4	Fluorescence quenching and enhancement	252
4.7	Other EM effects in SERS	254
4.7.1	Fluorescence quenching in SERS	254
4.7.2	Photo-bleaching under SERS conditions	255
4.7.3	Non-radiative effects in SERS	257
4.8	The chemical enhancement	258
4.8.1	Introduction	258
4.8.2	The charge-transfer mechanism	259
4.8.3	Electromagnetic contribution to the chemical enhancement	261
4.8.4	The chemical vs electromagnetic enhancement debate	263
4.9	Summary	263
<b>5</b>	<b>Calculations of electromagnetic enhancements</b>	<b>265</b>
5.1	Definition of the problem and approximations	266
5.1.1	The EM problem	266
5.1.2	Far field and local/near field	269
5.1.3	Some key EM indicators	273
5.1.4	The electrostatic approximation (ESA)	279
5.1.5	Other approximations	285
5.2	Analytical tools and solutions	286
5.2.1	Plane surfaces	287
5.2.2	The perfect sphere	287
5.2.3	Ellipsoids	289
5.2.4	Other approaches	289
5.3	Numerical tools	290
5.3.1	A brief overview of the EM numerical tools	290

5.3.2	A semi-analytical approach: the discrete dipole approximation	292
5.3.3	Direct numerical solutions	294
5.3.4	Other approaches	297
<b>6</b>	<b>EM enhancements and plasmon resonances: examples and discussion</b>	<b>299</b>
6.1	Quenching and enhancement at planar surfaces	300
6.1.1	The image dipole approximation for the self-reaction field	300
6.1.2	Enhancement and quenching at plane metal surfaces	303
6.2	A simple example in detail: The metallic sphere	307
6.2.1	Metallic sphere in the ES approximation	308
6.2.2	Localized surface plasmon resonances and far-field properties	314
6.2.3	Local field effects	324
6.2.4	Distance dependence	335
6.2.5	Non-radiative effects – surface-enhanced fluorescence	337
6.3	The effect of shape on the EM enhancements	342
6.3.1	Shape effects on localized surface plasmon resonances	343
6.3.2	Shape effects on local fields	346
6.3.3	Summary of shape effects	353
6.4	Gap effects – junctions between particles	354
6.4.1	Coupled localized surface plasmon resonances and SERS	354
6.4.2	EF distribution and hot-spot localization	359
6.5	Additional effects	361
6.5.1	Nano-particles on a supporting substrate	362
6.5.2	Surface roughness	364
6.6	Factors affecting the EM enhancements: Summary	364
<b>7</b>	<b>Metallic colloids and other SERS substrates</b>	<b>367</b>
7.1	Metallic colloids for SERS	368
7.1.1	Silver vs gold	368
7.1.2	Citrate-reduced colloids	369
7.1.3	Other types of colloids	371
7.1.4	Remarks on colloid fabrication methods	373
7.1.5	Dry colloids and other ‘2D planar’ SERS substrates	373
7.2	Characterization of SERS substrates	375
7.2.1	Microscopy	376

<i>PRINCIPLES OF SERS</i>	vii
7.2.2 Extinction or UV/Vis spectroscopy of SERS substrates	377
7.2.3 Other techniques: dynamic light scattering (DLS) for colloidal solutions	381
7.3 The stability of colloidal solutions	385
7.3.1 Introduction	385
7.3.2 The van der Waals interaction between metallic particles	387
7.3.3 The screened Coulomb potential	389
7.3.4 The DLVO interaction potential	394
7.3.5 Colloid aggregation within the DLVO theory	396
7.4 SERS with metallic colloids	399
7.4.1 Molecular (analyte) adsorption and SERS activity	399
7.4.2 Colloid aggregation for SERS	403
7.4.3 Focus on the ‘chloride activation’ of SERS signals	406
7.4.4 SERS from ‘dried’ colloidal solutions	408
7.4.5 SERS signal fluctuations	410
<b>8 Recent developments</b>	<b>415</b>
8.1 Single-molecule SERS	415
8.1.1 Introduction	415
8.1.2 Early evidence for single-molecule detection	417
8.1.3 Langmuir–Blodgett monolayers	423
8.1.4 Bi-analyte techniques	425
8.1.5 Single-molecule SERS enhancement factors	433
8.1.6 Single-molecule SERS: Discussion and outlook	435
8.2 Tip-enhanced Raman spectroscopy (TERS)	436
8.2.1 Introduction to TERS	436
8.2.2 TERS with an atomic force microscope (AFM)	437
8.2.3 TERS with a scanning tunneling microscope (STM)	438
8.2.4 Theoretical calculations on tips	440
8.2.5 Discussion and outlook	442
8.3 New substrates from nano-technology	443
8.3.1 Chemical synthesis of metallic nano-particles	444
8.3.2 Self-organization	447
8.3.3 Nano-lithography	448
8.3.4 Adaptable/Tunable SERS substrates	451
8.3.5 Micro-fluidics and SERS	454
8.4 Optical forces	455
8.4.1 A simple theory of optical forces	455

8.4.2	Radiation pressure in colloidal fluids	457
8.4.3	Optical trapping of metallic particles	458
8.4.4	Optical forces on molecules	459
8.5	Applications of SERS	460
8.5.1	Analyte engineering and surface functionalization	460
8.5.2	Substrate reproducibility and SERS commercialization	462
8.6	Epilogue	463
<b>9</b>	<b>Density functional theory (DFT) calculations for Raman spectroscopy</b>	<b>465</b>
A.1	A brief introduction to DFT	465
A.1.1	Computing aspects of DFT	465
A.1.2	Principles of DFT	467
A.1.3	Important parameters	469
A.2	Applications of DFT to Raman	471
A.2.1	Principle	471
A.2.2	Geometry optimization using DFT	472
A.2.3	Limitations of DFT calculations for Raman	473
A.3	Practical implementation	474
A.3.1	Brief overview of the input and output files	474
A.3.2	Common units and definitions in Raman calculations from DFT	477
A.3.3	Normal mode patterns and Raman tensors	479
A.4	Examples of DFT calculations for SERS applications	485
A.4.1	Validation of absolute Raman cross-sections of reference compounds	485
A.4.2	Raman tensor and vibrational pattern visualizations	485
A.4.3	Depolarization ratio breakdown under SERS conditions	489
<b>B</b>	<b>The bond-polarizability model</b>	<b>491</b>
B.1	Principle and implementation	491
B.1.1	Principle	491
B.1.2	Calculation of bond polarizabilities	492
B.1.3	Practical implementation	495
B.2	A simple example in detail	496
B.2.1	Bond-polarizability analysis	496
B.2.2	Raman polarizabilities	497
B.2.3	A brief comment on the symmetry	498

<b>C A brief overview of Maxwell's equations in media</b>	<b>499</b>
C.1 Maxwell's equations in vacuum	499
C.1.1 The equations	499
C.1.2 Maxwell's equations for harmonic fields in vacuum	501
C.1.3 Plane wave solutions in free-space	503
C.2 Maxwell's equations in media	503
C.2.1 Microscopic and macroscopic fields	503
C.2.2 The electromagnetic response of the medium	504
C.2.3 Electric polarization and magnetization	505
C.2.4 Constitutive relations	508
C.2.5 Boundary conditions between two media	512
C.3 Other aspects relevant to SERS and plasmonics	513
C.3.1 The microscopic field	513
C.3.2 Plane waves in media	515
C.3.3 Electromagnetic problems in SERS	517
C.3.4 Link with the static approach	518
<b>D Lorentz model of the atomic/molecular polarizability</b>	<b>523</b>
D.1 The Lorentz oscillator	523
D.1.1 Principle	523
D.1.2 Multiple transitions (multiple resonances)	525
D.1.3 Example: linear optical polarizability of rhodamine 6G	525
D.2 Link with macroscopic properties	526
D.2.1 Dielectric function in a dilute medium	526
D.2.2 Dielectric function in solids	526
D.2.3 The metallic limit	527
D.3 Summary	528
<b>E Dielectric function of gold and silver</b>	<b>529</b>
E.1 Model dielectric function for silver	529
E.1.1 Analytical expression	529
E.1.2 Comparison to experimental results	530
E.2 Model dielectric function for Au	531
E.2.1 Analytical expression	531
E.2.2 Comparison to experimental results	532

E.3	Remarks on the model dielectric functions	533
E.3.1	Limitations of the models	533
E.3.2	Comparison between Ag and Au	534
<b>F</b>	<b>Plane waves and planar interfaces</b>	<b>537</b>
F.1	The plane wave electromagnetic fields	537
F.1.1	General expressions	537
F.1.2	Propagating plane waves	539
F.1.3	Evanescent plane waves	539
F.1.4	Inhomogeneous plane waves: hybrid propagating/evanescent waves	540
F.2	Plane waves at a single planar interface	541
F.2.1	Plane wave polarization at an interface	541
F.2.2	General solution for plane waves at a planar interface	542
F.2.3	Physical waves in a semi-infinite region	546
F.2.4	The Fresnel coefficients	550
F.2.5	Surface modes	551
F.2.6	Incident wave modes	556
F.3	Reflection/Refraction at a planar interface	556
F.3.1	Incident, reflected, and transmitted waves	557
F.3.2	Snell's law	558
F.3.3	TM or $p$ -polarized waves	558
F.3.4	TE or $s$ -polarized waves	561
F.3.5	Special cases	563
F.4	Multi-layer interfaces	564
F.4.1	Principle	564
F.4.2	$p$ -polarized or TM waves	565
F.4.3	$s$ -polarized or TE waves	567
F.4.4	Particular cases of interest	567
F.4.5	Implementation in Matlab	567
F.5	Dipole emission close to a planar interface	570
F.5.1	Total decay rates	571
F.5.2	Radiative decay rates	571
<b>G</b>	<b>Ellipsoids in the electrostatic approximation</b>	<b>573</b>
G.1	General case	573
G.1.1	Some definitions	573
G.1.2	Ellipsoidal coordinates	574

G.1.3	The electrostatic solution	575
G.1.4	Some important EM indicators for ellipsoids	578
G.1.5	Some aspects of the numerical implementation	581
G.2	Oblate spheroid (pumpkin)	583
G.2.1	Geometrical factors	583
G.2.2	Surface averages	584
G.2.3	Limit of large aspect ratio	585
G.3	Prolate spheroid (rugby ball)	585
G.3.1	Geometrical factors	585
G.3.2	Surface averages	586
G.3.3	Limit of large aspect ratio	587
<b>H</b>	<b>Mie theory and its implementation</b>	<b>589</b>
H.1	Introduction	589
H.1.1	Motivation	589
H.1.2	Overview of this appendix	590
H.2	The concepts of Mie theory	590
H.2.1	The electromagnetic equations	590
H.2.2	The vectorial wave equation in spherical coordinates	591
H.2.3	Scattering by a sphere	593
H.2.4	Optical resonances of the sphere	596
H.2.5	Some aspects of the practical implementation of Mie theory	597
H.3	Basic formulas of Mie theory	598
H.3.1	Conventions	599
H.3.2	Spherical coordinates: A brief reminder	599
H.3.3	Definition and properties of the vector spherical harmonics	600
H.3.4	Expressions for the susceptibilities	605
H.3.5	More on optical resonances	607
H.3.6	Absorption, scattering, and extinction for an incident beam	608
H.3.7	Absorption and radiation for a localized source	611
H.3.8	Far-field radiation profile	612
H.3.9	The local field at the surface	612
H.4	Plane wave excitation of a sphere: The ‘original Mie theory’	613
H.4.1	Expansion of a plane wave in vector spherical harmonics	613
H.4.2	Extinction, scattering, and absorption for plane wave excitation	614
H.4.3	Average local field at the surface	615
H.4.4	Useful expansions for plane wave excitation	615

H.5 Extensions of Mie theory	615
H.5.1 Emitter close to a sphere	615
H.5.2 Coated spheres	621
H.5.3 Multiple spheres and generalized Mie theory (GMT)	625
H.6 Example of implementation of Mie theory with Matlab	626
H.6.1 Common problems	626
H.6.2 Other issues specific to Matlab	627
H.6.3 Some aspects of our implementation	627
